

## Statement of Purpose

Glad to present myself, Rina Maharjan, daughter of Mr. Premkaji Maharjan and Mrs. Basumaya Maharjan, permanent resident of Thankot-03, Kathmandu Nepal. During the period of my primary level, I was very enthusiastic in my study in compared to my colleagues. I attended Bright Future Secondary School. Where I had spent very memorable 10 years with my friends, teachers and passed out school leaving certificate (S.L.C.) securing 75% in 2015.

For the purpose of further studies, my parents and I decided to join the higher level education after my result of S.L.C, I had joined Everest Higher Secondary School from 2015 A.D to 2017 A.D. In that school, I had spent approximately 2 years with energetic, enthusiastic and hardworking teachers and friends. With the regular guidance and inspiration of my teachers, I was able to secure 59.70% in +2 in Science. Again, after the result of +2, I always have a dream to study in Australia and joined IELTS class to pursue my vocational education in Australia.

In today's date, Australia has become a dream destination for international students with the help of its academic excellence over the years. The young and energetic Australian society welcomes international students supporting for cultural diversity, friendly natives and high quality education. Given the importance of globalization in technology, an education that doesn't fully addresses the international and multicultural realities of modern world is incomplete. I have therefore decided to pursue my vocational education overseas, as per the expertise and facilities provided in my country's educational institutions are limited and thus unable to match the diversity and multiculturalism available in the Australia. Due to worldwide recognition of Australian vocational education training, career oriented education system, flexibility in the course using advance technologies; I have always been interested to study in this place. Also for USA and UK we need to sit for SAT/ ACT and in case of Australia I need not to appear for any such exam. So I decided to study in Australia. It provides quality education in affordable fee. Moreover, unlike in US and UK, international students can also work for up to 40 hours per fortnight which helps students to earn some pocket money and also gain useful experience in a foreign country which is always valuable.

On the other hand, the cost of education in USA is slowly rising every year as the US dollar is becoming more powerful in the market which is leading to increased tuition costs. Even with financial assistance the cost of education in USA is leaning towards the more expensive end. Also, each state follows a different curriculum of courses creating students of varying standards of education. The crime rates in USA, UK are higher compared to Australia, which is one of the biggest concerns of students in the overseas countries. And as a perfect destination, I have

chosen Melbourne to take my study further. There are many reasons for choosing Melbourne for my higher education and Melbourne being Victoria's capital is one of them. Melbourne is one of the world's best cities and is rated highly in education, entertainment, healthcare, tourism and sports making it the world's most livable city for the sixth time in a row in 2016 according to the Economic Intelligence Unit. It also provides world class education and the education credentials are recognized by international institutions and employers all over the world. It is also the Leading international student city and is the top Asia Pacific Education provider. Melbourne has a multicultural society and a healthy environment with a diverse range of cultural and sporting activities.

I have selected Australian center for further education (ACFE) because it has many reasons which can be appealing for international students as well. It has affordable fee structure which structure which my parents can easily pay it. I have strong financial background and full support of my family to pay tuition fee as well as other living expenses. When I compare fee structures with higher education have high fees. This college covers multicultural students without any discrimination. Another main reason is that it has smaller class than other. The smaller size means increased face-to-face interactions between students and teachers resulting in better academic performance. This also encourages increased learner's participation in training and assessment. This college has also made threshold for those students who cross the regulations of college. The possibilities of getting part time jobs are higher and satisfactory due to excellent location in Melbourne. The ACFE has got satisfactory result in past and I am sure it will also get worthwhile result by making students very sensitive in their study. The ACFE College is well established and managed college in Australia. Therefore, there are a number of colleges which delivers similar types of Dental technology courses and higher education in Australia but ACFE has become my first and last choice.

As, I have done further research about ACFE, ACFE embraces the value of providing opportunities to individuals from diverse backgrounds to be able to practice their chosen profession. The organization recognizes that education is a continuous and lifelong process.

I have chosen Diploma of Dental technology at ACFE to build my dental professional careers. The main reason of choosing this course is to get a better opportunity in dental sector as it is widely known as highly paid and highly demanding profession. From my childhood, I am interested to learn about dental technology. I have chosen this course because it will provide me knowledge and skills to perform a number of dental technician tasks and construct and repair dentures, pre or post oral, crowns, bridges and partial dentures for the people. I want to work in Nepal after my study in Australia. If becoming a dental technician sounds like something I would be passionate.

At ACFE, dental technician programs take place over 96 weeks or around 2 years so after the completing the dental technician course, I will enter the industry as fully qualified dental technician able safely and effectively complete entry-level roles and responsibilities. I will be able to work individually in private or public laboratories or in small group under the supervision.

Definitely, if I am able to get good dental technology qualification in Australia then I would certainly get job in Nepal and this will lead me to make my future plans and career pathways. Every person should focus on their education because it helps us to earn eminent prestige, fame, money, etc. which finally help us to establish our future and career well. Every person should know the value of time and money. As the proverb too says, "Time and tide waits for no one". I have chosen this program myself and my first priority will be my study. In addition to this, those things which we do from our anxiety can get large success in our life. Secondly, money plays the vital role to move forward. Apart from my study, I'll make an effort to complete this program. After completing Diploma In Dental Technology from ACFE, I have further plan to join higher education to get my Bachelor of Dental Technology from Griffith University, Gold Coast, Australia where ACFE and Griffith University have credit precedents facility as a Credit for Prior Learning and Articulation system in Australia. So, I can get both Diploma to Degree qualifications in Australia to enhance my practical to research opportunities.

As we know Nepal is landlocked small country. It has still lots of things to develop the nation as compared to the developed country like Australia, USA, and Canada etc. it is very necessary to make the country developed by progressing in all sectors. Mostly I will focus on the dental technology as my course is related to it. So, obviously, there are opportunities that can be found in my country; Nepal after completion of my course. After completion my dental technology course, I will surely return to my home country as I have dream to work in many named dental hospitals. There are many small and big dental hospitals which offer jobs. I have also plan to establish my own dental hospital in Nepal after gaining some experience in hospitals in future. These are the reasons why I am dreaming to study dental technicians.

I have done much research about dental technology to study in my country but I couldn't find the proper colleges which could provide proper education and facilities like in the ACFE. My country Nepal only provides theory besides than the practical. So I am totally focusing on the process of getting student visa in Australia.

I am from middle class family background in Nepal. I have 5 members in my family. As I attached the document, my father owns a law firm in Anamnagar. And he has saved approximately 35 lakhs in Sanima Bank. My parents have adequate tangible and intangible property to impose my study during stay in Australia. My parents have good income from business and have eminent prestige, esteem and respect in my municipality. My mother has

incomes from shop. So, my parents have sound incomes and enough deposit in the bank to study in Australia.

Finally, I declare the following that, I have made well informed decision for my purposed study, I will do my best to complete the course of study with highest possible grade within scheduled period. I have required level of qualification, English language ability and financial ability to complete the course of study within scheduled period. I understand student visa conditions and will strictly comply with them.

Yours Sincerely,

Rina Maharjan
